

Here is a summary of the past month of migrant deaths. A terrible accounting of the effects of the weather, among other things. This is as bad as any month since I started handling the data about five years ago.

Recently found individuals grouped by PMI (Post Mortem Interval):

- 9 dead less than a day
- 4 dead less than 1 week
- 7 dead less than 5 weeks
- 2 dead less than 6-8 months
- 4 dead more than 6-8 months

Total: 26

Updates for other cases:

- 3 individuals identified by name
- 4 sets of partial remains identified by DNA as belonging with another set of remains and removed from database
- 1 individual from 2003 whose recovery location (Growler Valley on the bombing range) was recently found in case files

Total deaths currently recorded in our database: 3,292

The attached map shows that the deaths were spread widely across the border region.
